Composite Educational Development Index

2009-10 vs 2010-11

(All schools: all category, all management)

Some note about EDI & DISE

- Some variable may be made more dependent like gender and caste wise population, no. of girls schools- because % of Muslim pupil will be more where Muslim population is high, similarly % of female teacher will be high where no. of girls school is high, hence after consultation with root level stake holder like education officers, we think some variable can be made more dependent.
- In DISE s/w –length of schname attribute may be extended to at least 100 char.
- In DISE s/w- sec field of lat an longt may be extended to 4 char(dec no), as it appears like:- 22.777

Reference and Development Team
